SUMMARY

Technical operations professional with an MSc in Chemistry and experience in AI evaluation leadership, process improvement and Python, SQL and BI tools. Built Excel automation adopted by all project QA reviewers, developed technical learning materials and assessments, and taught organic chemistry to more than 60 students.

TECHNICAL SKILLS

- Analysis & automation: Python, pandas, NumPy, SQL, MySQL, Excel, REST APIs, JSON
- Reporting & applications: Power BI, Power Query, DAX, Tableau, Streamlit
- Development & delivery: Git, GitHub, Jupyter Notebook, VS Code, technical documentation, reviewer training

EXPERIENCE

AI Training & Evaluation QA Lead| Invisible Technologies/Dataroo LLC 09/2023 to Present

- Standardised review scoring through an Excel tool adopted by all project QA reviewers, converting error counts across multipart tasks into a seven-point score.
- Contributed to a specialised AI evaluation project achieving a 95% final pass rate against a target exceeding 90% by developing evaluation criteria, reviewer guidance and calibration practices.
- Identified reasoning errors and recurring failure patterns by investigating approximately 50 technical evaluations daily.
- Led chemistry QAs and subject matter experts within wider quality operations involving 100+ contributors, managing the review queue, hiring chemistry QA staff and training reviewers.

Graduate Research Assistant| Ohio State University 08/2021 to 05/2023

- Evaluated competing catalytic reaction pathways through computational chemistry research using Gaussian 16 and GaussView, validating results and communicating findings through scientific visualisations and technical documentation.

Process Improvement Intern| BASF 05/2018 to 08/2018

- Reduced chemical purification time from approximately 48 hours to 3 hours by adjusting process conditions, extraction proportions and purification steps.

PROJECTS

GrantScope Research Funding Analytics 08/2026 to 08/2026

- Produced 3,339 integrated funding records by building Python and pandas workflows to acquire, clean, combine and validate NSF API data and CORDIS files.
- Delivered a public Streamlit application with similarity search across 2,943 documents, using scikit-learn TF-IDF to help users investigate related funded research.
- Established documented validation across identifiers, dates, funding values and dataset relationships, producing 19 passing checks and one informational review item.

UK Pharmaceutical Procurement Analytics 10/2026 to 10/2026

- Analysed 170 procurement processes and 1,222 award records using MySQL, translating findings into Power BI and Tableau reports.
- Identified 12 processes accounting for 69.56% of award records and missing or nominal values in 65.05% of contract records, documenting limitations in spending analysis.
- Validated dashboard totals against SQL results after preparing tables in Power Query, configuring relationships and developing DAX measures.

EDUCATION

Master of Science, Chemistry| The Ohio State University 2021 to 2023

Bachelor of Science, Chemistry| Northern Michigan University 2014 to 2019

CERTIFICATES

Data Analytics Bootcamp| Ironhack 06/2026 to 08/2026

- Completed intensive project-based training in Python, SQL, statistical analysis, Tableau, data visualization, API integration and interactive application development.
