SUMMARY

Analytical professional with an MSc in Chemistry, AI quality assurance leadership experience, and applied expertise in Python, SQL, Tableau, and data analysis. Progressed to QA Lead at Invisible Technologies, coordinating quality operations involving 100+ contributors and contributing to an AI evaluation project that achieved a 95% pass rate. Brings an AI-native approach to research, coding, multimodal analysis, and workflow improvement, combining AI-assisted productivity with rigorous validation and independent judgment.

TECHNICAL & PROFESSIONAL CAPABILITIES

Professional Capabilities

- Data Analytics & Business Intelligence: Exploratory analysis, KPI monitoring, trend investigation, reporting, evidence-based recommendations
- AI-Native Workflows: Iterative prompting, multimodal analysis, AI-assisted coding, research, workflow design, output verification
- AI Evaluation & Quality Assurance: Model evaluation, quality criteria, reviewer calibration, error analysis, root-cause investigation
- Data Quality & Governance: Data cleaning, validation, consistency checks, normalization, data reliability, documentation
- Stakeholder Collaboration & Leadership: Cross-functional coordination, SME guidance, requirements clarification, technical communication, process improvement

Technical Skills

- Programming & Analytics: Python, pandas, NumPy, SQL, MySQL, Jupyter Notebook
- Statistics & Analysis: Exploratory data analysis, hypothesis testing, A/B testing, quantitative analysis
- Data Preparation & Integration: Data cleaning, transformation, validation, REST APIs, JSON, relational datasets
- Visualization & Applications: Tableau, Streamlit, Excel, interactive dashboards, KPI reporting
- Development & AI Tools: Git, GitHub, VS Code, AI-assisted development, multimodal AI tools

EXPERIENCE

AI Training & Evaluation QA Lead | Invisible Technologies/Dataroo LLC **09/2023 to Present**

- Progressed to QA Lead and chemistry domain owner, supporting AI evaluation quality operations involving 100+ contributors.
- Served as a coordination point between subject matter experts, internal management, and external AI project stakeholders to align quality expectations and review practices.
- Investigated approximately 50 technical evaluations daily, identifying reasoning errors, recurring failure patterns, and opportunities for corrective action.
- Developed evaluation criteria, reviewer guidance, and calibration practices to improve consistency, reliability, and quality monitoring.
- Contributed to a specialized AI evaluation project that achieved a 95% final pass rate against a quality target exceeding 90%.

Graduate Research Assistant | Ohio State University **08/2021 to 05/2023**

- Conducted computational chemistry research using density functional theory to investigate catalytic hydrogenation mechanisms and reaction pathways.
- Analyzed molecular structures, transition states, and energy profiles using Gaussian 16 and GaussView to evaluate competing mechanistic hypotheses.
- Validated computational results and communicated findings through scientific visualizations, technical documentation, and evidence-based interpretation.

Process Improvement Intern | BASF **05/2018 to 08/2018**

- Optimized an industrial chemical purification process, reducing processing time from approximately two days to three hours.
- Systematically adjusted process conditions, extraction proportions, and purification steps to resolve bottlenecks and improve process efficiency.
- Documented experimental results and process improvements to support reproducibility and further development toward pilot-scale implementation.

Educational Content Developer | Macmillan Learning **11/2023 to 05/2024**

- Developed and reviewed structured digital educational assessments, applying established standards for technical accuracy, consistency, and clarity.
- Identified and corrected content inconsistencies through systematic quality review and documentation.

Graduate Teaching Assistant | Ohio State University **08/2021 to 05/2023**

- Delivered Organic Chemistry II instruction and developed learning materials for more than 60 students, translating complex scientific concepts into accessible explanations.

PROJECTS

GrantScope Research Funding Analytics **08/2026 to 08/2026**

- Developed GrantScope, an interactive research discovery application integrating more than 33,000 research and funding records from multiple public sources.
- Built Python and pandas workflows for data extraction, transformation, validation, and concept-based research matching.
- Created a Streamlit application and complementary Tableau dashboard to support exploration of related research projects and funding patterns.

UK Pharmaceutical Procurement Analytics **10/2026 to 10/2026**

- Developed a MySQL analytical model and interactive Tableau dashboard to investigate 170 UK pharmaceutical procurement processes and 1,222 award records.
- Identified that 12 procurement processes generated 69.56% of award records, revealing substantial concentration in award activity.
- Evaluated contract-value completeness and identified missing or nominal values in approximately 65% of records, highlighting limitations in financial interpretation.

EDUCATION

Master of Science, Chemistry | The Ohio State University **2021 to 2023**

Research focus: Computational chemistry, density functional theory, quantitative modeling, scientific data validation, and technical communication.

Bachelor of Science, Chemistry | Northern Michigan University **2014 to 2019**

CERTIFICATES

Data Analytics Bootcamp | Ironhack **06/2026 to 08/2026**

- Completed intensive project-based training in Python, SQL, statistical analysis, Tableau, data visualization, API integration, and interactive application development.
